DETAILED ACTION

Claim Rejections – 35 USC 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a. Claim 1, the term 'selectively' is relative and therefore indefinite.
- b. Claim 8 describes 'at least one fold line at least partially defining said panels' is indefinite. It is unclear how the fold line defines the panels.
- c. Claims 14 and 21 describe a 'relief notch' but it is unclear what this 'relief notch' is and where it is located on the base label. The description of 'relief notch' is inadequate in the specification.

Claim Rejections – 35 USC § 103(a)

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-21, are rejected under 35 U.S.C. as being unpatentable over Instance (U.S. 4,933,043).

Art Unit: 1774

5. Instance discloses an adhesive label which has a base layer (18), an overlayer (30) and layers of folded information between the base layer and overlayer (see figure 3) while showing a tab feature (40) (see figure 7). Instance additionally discloses a label for affixing to a container comprising a series of panels with folded lines and a region extending beyond the edge (column 1, lines 25-43) and further comprising a backing of release material (column 2, line 55). Instance discloses a label made of paper (column 4, lines 52-54). The reference discloses the cover comprising a transparent plastic polymeric film (column 5, lines 30-39) covering part of the front surface of the label (column 5, lines 53-58). Instance discloses tabs and the panel detaching and re-attaching to the support web (column 6, lines 34-42). In claims 1 and 15, 'a label... suitable for being attached to a mounting surface' and 'suitable for coupling said base member to said mounting surface' adds no positive recitation to the claims. Additionally, in claims 1, 3, 9 and 15, 'at least one sheet forming said brochure' is a product by process claim limitation. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966. Instance does not explicitly disclose the same tab features as claimed (figure 5), it would have been obvious to one of ordinary skill in the art to add tabs that project from the edge of the information layer(s) so that a reader can quickly flip to the relevant layer of information.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Instance (U.S. 4,592,572) is pertinent because it discloses a label comprising a folded panels that are affixed to a mounting surface (abstract and column 1, lines 1-6 and 45-60). Additionally, Instance (U.S. 5,174,605) is pertinent because it discloses a label composed of paper or plastics with a backing of release material and having a succession of covers partially covering the label surface (column 1, lines 25-68).
